[Help for this Page](#)

When you access Salesforce from an IP address that isn't trusted for your company, and you use a desktop client or the API, you need a security token to log in. What's a security token? It's a case-sensitive alphanumeric code that's tied to your password. Whenever your password is reset, your security token is also reset.

After you reset your token, you can't use your old token in API applications and desktop clients.

Reset Security Token

How to get sf security token

1. If successful you will see a success message. The token has been sent to you email id.
